

Rice Electronics provides the best available technical support services to the industrial marine transportation and shipping industries. Our ISO 9001:2008 Certification certifies us to sell, install, repair, rent, and integrate marine navigation and communication equipment as well as electronic industrial video systems. But while we sell a full array of cutting edge, top-of-the-line, cost-effective marine technologies, our first priority is to provide our customers with the best technical support services anywhere. When other support and service providers and/or manufacturer factories are closed, who are you going to call? Call Rice Electronics, for we pride ourselves on providing "Oilfield Style" service and support - 365 days a year, 7 days a week, 24 hours per day - without fail, in any weather, and even on holidays - here in the Gulf of Mexico, as well as globally around the world.

Because we consider ourselves a service organization first and foremost, our offices are strategically located geographically in Houston, Orange, Rockport/Aransas Pass, and Morgan City, so that we can respond quickly to your local calls for technical assistance. We literally never "miss the boat" when it comes to expediently responding to your needs and providing the best support service to your organization. Our services are more economical too, since we're conveniently located in major industrial marine areas along the Louisiana/Texas coast, you save money on mileage charges for our service calls.

Each Rice Electronics location boasts several FCC-licensed, ISO 9001:2008 compliant service technicians, some with over 20 years experience in Marine Electronics, Communications, Navigation, and System Integration. Each member of our technical support staff has the ability to provide service down to the component level on a wide spectrum of products covering a broad range of manufacturers. Of course, our expertise and certifications make us the best possible choice to conduct any and all of your required equipment systems inspections.

We always have our finger on the pulse of the Industrial Marine industry, which allows us to continue to offer an ever-growing array of products and services. One such example of our flexibility and initiative can be shown by our quick response to the SOLAS/GMDSS requirements for Security Systems. Rice Electronics now can help your company design, install, and maintain security systems on U.S. registered ships that will comply with the U.S. government's latest regulations that require them in the wake of 9/11.

Call Rice Electronics to find out more about our full line of navigation, safety, security, and data communications technologies and how we can design your state-of-the-art, full-function, integrated wheelhouse. Or email us for more information or a quote at sales@radar-radio.com.

GPS NAVIGATION

The availability of products range from pocketsize units with map overlays to chart table units with a myriad of output signals to interface with radar and electronic charting devices (ECDS).

RADAR SYSTEMS

Call Rice Electronics to find out more about our full line of JRC, Sitex Koden, Raytheon, Sperry, SIMRAD and Raymarine radar technologies to find out which one will best serve you.

COMPASS & AUTOPILOTS

Choose from a wide selections of systems that learn the characteristics of the vessel's handling and minimize rudder movement reducing drag.

AIS TECHNOLOGIES

The International Conference on Maritime Security concluded on December 9 and 10, 2002 and adopted a number of revisions to the Safety of Life at Sea (SOLAS) Convention. Call us for more information on the status of the implementation date for your Automatic Identification System (AIS).
