

Rice Electronics offers a wide variety of proven products to enhance Plant and Refinery performance, reliability, safety, and security as a fully integrated system. Our capabilities in combining this wide range of cutting edge technologies into an easily usable, customizable communications system are unsurpassed, even in the face of your most complex, demanding needs.

We excel at taking systems that already exist and updating, adding other systems, or creating greater economy and efficiency by eliminating redundancies. For example, we can retrofit your plant or refinery for computer network cabling to take advantage of the latest internet computer technologies. Once concrete has been poured, how can you rewire your facility? Or if you have tons of piping or heavy machinery stored, how can you economically and quickly move them to rewire? Using state-of-the-art DSL technologies which takes advantage of your existing PBX phone lines, Rice Electronics can solve your problem. Need to access control signals from hard to reach sensors? Map any sensor through our special custom electronics design process and make it viewable in real-time from any computer - fed through an ethernet converter and - via our custom DSL system - straight into your control room.

Call us at Rice Electronics to find out more about our full line of communications and automation systems integration services and technologies to find out which one will best serve you. Or email us for more information or a quote at sales@radar-radio.com.
