

Here's the scenario. You're on a Production Platform out at sea and you are having some mechanical problems. The sky has turned pitch black and - there's no doubt about it - a huge storm is approaching. Your only link to dry land and safety is your communication system. When it comes to communications, top performance and total reliability are necessities. Rice Electronics only sells the most dependable Platform communications equipment available.

Rice Electronics weaves together all your communications technologies into a fully integrated system, capitalizing on the strengths of all the components and on resources already present such as cabling and wiring. We take systems that already exist and update them, add other systems, or create greater economy and efficiency by eliminating redundancies. We can take any sensor (for example, General Alarms, Fire & Gas Alarms) and map its electronic signals to your PBX, Phone Systems, Intercoms, video CCTV systems as well as computers via LAN and DSL on your ship for full Safety Communication System Integration.

Call us at Rice Electronics to find out more about our full line of safety, security, and data communications technologies and how we can design your integrated, fully functional communications system for your Production Platform. Or email us for more information or a quote at sales@radar-radio.com.
